

Nov., 1976

QUAC and the RASC, KINGSTON BRANCH

NEXT MEETING:

TUES, Nov. 23, 8:00 p.m.

ELLIS, Rm 222.

There will be two films at the meeting:

- 1.) "The Universe" (the one that bombed on us during our first meeting)
- 2.) A Surprise package

Any going to T.O. should bring their \$8 to this meeting, if they haven't already paid it.

T-shirts may be available, so bring \$ for them, also.

The Observer's Handbook, 1977 from RASC will soon be available. They're \$3.00 for non-RASC members, and you will be able to get them thru' Sue McDougall.

The sky for the next few weeks:

	d.	b.	m.	
Nov.	24	20		Mars in conjunction with Sun
	28	07	59	First quarter moon.
Dec.	3	13		Moon at apogee (405,930 km.)
	6	13	15	Full moon

These are just a few of the things listed in the Handbook.

Tuesday, Nov. 16, instead of our regular observing session, 13 club members braved the cold of Fort Henry Hill to watch the Leonid Meteor shower, and a few submarine races (say no more, say no more! nudge, nudge!) A good time was had by all, although the Leonids were rather scarce. Chris Ingold kept a tally of who saw what, and will be bringing the results to this meeting.

And now, for those who missed it, a Black Hole joke:

Q. How can you tell if there's a Black Hole in your refrigerator? .. . . . . .

Any contributions welcome - I would definitely type a worthy story!

Sorry - this not typed - arrived 2 days before the time - I mean take - waste
