OF SEMINAR/WORKSHOP.
BRING ANY BOOKS, PICTURES
OR WHATEVER, THAT YOU
HAVE, AND WE'LL DISCUSS/
LEARN/OBSERVE.

TRIP TO T.O.

Apparently, nine members made the trip last Saturday to the Toronto Planetarium. I was only able to get very sketchy reports about the trip, but I'm sure that even though there were nine of them in a van, they used conventional ways to stay warm. I don't want any nasty rumours to start, so I will say no more. (Any similarity between this newsletter and the last is probably due to the fact that there is only one person writing/producing/directing the whole thing!)

NEWS FLASH - I have just learned, through an extremely reliable source, that Mercury will be at perihelion (!) on Saturday, January 1, 1977!

Any who are not impressed by this fact, because they don't know what it means should be sure to come to the workshop. Those who are not impressed, because they do know what it means, should keep their mouths shut!

Do take this week - Sorry.

See you on
Tues. for coffee,
cookies, and a "learning
experience"]
